

SafetyChoice® G2000 PERS Technology Features

- The tabletop PERS unit with built-in speakerphone offers hands-free, two-way voice communication
- Emergency call button is always within reach on the lightweight, waterproof pendant and can be worn on the wrist or around the neck at all times
- Alerts help in the critical first moments of an emergency
- System operates up to 24-hours with a rechargeable backup battery in case of a power outage
- Friendly, professional representatives are on duty at the central monitoring station 24 hours a day, seven days a week; they stay on the line until help arrives
- Visual and audible alarms make PERS ideal for hearing and visually impaired clients

PERSONAL EMERGENCY RESPONSE SYSTEM

The Comforting Choice To Help Keep Seniors Safe At Home

The Comfort Keepers® *SafetyChoice®* Personal Emergency Response System (PERS) helps people live safely at home. When combined with Comfort Keepers in-home care services, *SafetyChoice* provides around-the-clock monitoring so you know help is always at hand.

With a simple push of a button, a response professional will answer the client through the two-way PERS. The responder will then dispatch the appropriate help—an ambulance, neighbor, family or friends.

For added safety, the G2000 PERS can be expanded to monitor up to 16 additional safety accessories, including motion detectors, window/door contacts, pressure sensitive floor mats.

SafetyChoice G2000 PERS: The traditional *SafetyChoice* PERS is a tabletop console that allows the client access to our 24-hour centralized monitoring station.

We offer a variety of PERS types to fit your lifestyle:

The Home and Yard PERS-LM5000 and the Compact G4000 offers a choice in your PERS units.

Active Lifestyle: For seniors with increased mobility and independence, we offer a lightweight pendant, wristband or belt clip.

Wireless PERS with GSM Cellular Technology: This device offers cellular connectivity for those who no longer have a landline.
